

ONESHEET

AVEVA™ Production Management

Unlock the full value of your data in the cloud

AVEVA Production Management now supports hybrid cloud solution architectures, enabling on-premises event data to be published and stored on CONNECT, our industrial intelligence platform in the cloud. AVEVA's ready-to-use cloud data and visualization services enable analyzing your event data in context with data from other systems. This provides a single pane of glass experience that breaks down data silos and facilitates collaboration across teams and organizations. Seamlessly link your data to AI/ML services and third-party visualization tools to find new ways to optimize your operational performance and sustainability.

AVEVA

AVEVA enables hybrid cloud Production Management solutions through cloud integration features and specific cloud service extensions for managing data from continuous operations. These added capabilities are ready to use for existing and new AVEVA Production Management users:

Cloud Integration

On-premises software components curate AVEVA Production Management configuration and events data and publishes it to the cloud in a safe, secure and robust manner.

This integration with CONNECT data services is supported for AVEVA Production Management 2023 and newer versions.

Data Services

Store, query and perform enhanced analysis. Uncover rich relationships across other industrial data types, including assets, events, and reference data, among others.

Visualization

Quickly visualize data and create dashboards with a self-service, no-code dashboard experience. Visually relate data from distributed sites with one another, as well as with other operational data types in a single pane of glass. Share actionable information with operations and other teams, anywhere through a web browser.

Key benefits:

Create a connected data ecosystem

Use the cloud to securely collect, store and visualize operational data from multiple systems within your enterprise to eliminate data silos and overcome organizational boundaries. Foster greater collaboration by securely sharing data and information views with internal teams or trusted external business partners.

Improve productivity and sustainability with advanced analytics

Analyze and compare operational performance for continuous improvement best practices and acquired knowledge sharing with a single source of truth across the business. A central data repository makes it easy to identify and scale opportunities to optimize operations with AI and predictive analytics services.

Gain visibility into distributed solutions

Get visibility into distributed solutions and improve your supply-chain planning with near real-time site status information. Combine OT and IT data to visualize the bigger picture so you can make data-driven decisions and improve your business agility and resilience.
